2 Choices of materials

- **Chrome Vanadium Tungsten tool steel:**
  - Exceptional toughness and impact strength
  - Superior wear resistance
  - Resistance to high temperature fatigue
- **Beryllium Copper:**
  - Reduces tip freeze-offs
  - Eliminates stringing problems

Replace only the tip for:
- Longer lengths for recessed sprue bushings
- Orifice size to reduce pressure drop at nozzle
- When radius is worn or damaged
- Internal design matching your type of plastic material

Available in 3 Internal Designs

**GENERAL PURPOSE**
(Straight Bore)

For all general purpose materials; i.e. styrene, polyethylene, polypropylene etc.

**NYLON**
(Reverse Taper)

Reduces drool when processing nylon.

**FULL TAPER**

For use with ABS, PVC, acrylics and other engineering materials.
