Snap onto Locating Ring to Indicate Status of Mold

- Prevents press setup with mold that is not ready.
- Prevents mold repair delays due to poor communication.

When repair, revision or engineering change is needed, molding room puts note or work order under **Red NEEDS WORK** cap and snaps it onto mold locating ring.

When standard preventive maintenance is needed, molding room puts note or work order under **Yellow P.M. REQ'D** cap and snaps it onto mold locating ring.

When work is done, tool room signs off on note or work order, puts it under **Green READY TO MOLD** cap and snaps it onto mold locating ring.

**Typical End-of-Run WorkFlow with Smart Caps**

- Production Run Finished
- Does Mold Need Repair / Revision / Eng. Change?
  - Yes: Mold Sent to Tool Room for Mold Work
  - No: Mold Sample / Repair Confirmed
    - Yes: Mold Accepted for Production
    - No: Mold Not Accepted

- Ready to Mold
- Mold Stored for Future Production Run
- Ready to Mold
- Mold Sent to Tool Room for P.M.
- Ready to Mold
- P.M. REQ'D
- Does Mold Need P.M.?
  - Yes: Mold Sent to Tool Room for P.M.
  - No: Ready to Mold
