

Undiluted ETHYLENE GLYCOL

**For both Chillers & Mold Temperature Controllers
With Corrosion Inhibitors to Protect Equipment**

Highest Quality

Why Inhibited, Undiluted Ethylene Glycol?

- It is better than un-inhibited, which becomes acidic and very corrosive during use.
- It is better than automotive antifreeze, which also becomes acidic and corrosive in use. In addition, automotive antifreeze must be agitated as it would be in a car. If not, its silica-based inhibitors form a gel that prevents heat transfer.
- You don't pay for added water.

What proportion should I use?

For best heat transfer, use the least needed for the temperatures you need to achieve. Use a minimum of 30% for corrosion resistance.

Temperature	% Ethylene Glycol in Water
-5 to +220 F	30
-34 to +225 F	50
-50 to +250 F	80

PART#	DESCRIPTION	PRICE
EG5	5 Gallon Container	\$42.00
EG15	15 Gallon Container	\$131.00
EG55	55 Gallon Drum	\$380.00
